

Randolph Lemon Jr.

Charleston, SC | rjlemon334@gmail.com | (843)-330-7983 | www.linkedin.com/in/randolph-lemon | reallyrj.github.io/portfolio

Professional Summary

IT professional with a B.S. in Computer Information Systems and hands-on experience in PCI DSS-scoped environments, segmented networks, patching, and hardware lifecycle management. Builds secure, cloud-deployed software in Python, C#, and JavaScript. Earning CompTIA Security+ by February 2027 and seeking an IT or security-focused role.

Skills & Qualifications

- **Security & Compliance:** PCI DSS environments, patch management, physical security and tamper inspection, network segmentation, chain of custody, secure asset disposal
- **Networking & Systems:** Switch installation and port configuration, wireless access points, LAN cabling (RJ45/TIA-568), imaging and deployment, hardware diagnostics, Windows, Unix
- **Programming & Data:** Python, Java, C#, C++, SQL / SQL Server, JavaScript, HTML/CSS, Git, REST APIs, CI/CD
- **Tools:** Power BI, Microsoft Office Suite, Adobe Acrobat Pro, Railway, Web Crypto API

Education

University of South Carolina, Molinaroli College of Engineering and Computing

May 2026

B.S. Computer Information Systems | **Minor:** Business Information Management | **GPA:** 3.42

Relevant Coursework: Information Security Principles, Intro to Computer Security, Intro to Computer Networks, UNIX/Linux Fundamentals, Computer Hardware Foundations, Database System Design, Data Structures & Algorithms, Software Engineering

Certifications: Google AI Essentials (2026)

Professional Experience

Customer Engineer, NCR VOYIX, Charleston, SC

June 2026 – Present

- Service POS terminals, self-checkout units, and payment peripherals within PCI DSS-scoped cardholder data environments, inspecting card readers for tampering and skimming devices
- Deploy firmware and software patches to POS endpoints and peripherals, keeping devices on supported, secure versions
- Install and configure network switches on segmented store networks per site-specific port and cable security standards; terminate, test, and replace RJ45/TIA-568 LAN cabling
- Troubleshoot wireless access points and network switches in elevated retail installations using aerial lifts, and perform preventive maintenance on back-office server and network equipment to reduce hardware failures and downtime
- Maintain chain-of-custody records for hardware in a field service platform, supporting asset accuracy and audit readiness
- Diagnose, repair, and calibrate retail hardware on-site across 20+ service calls per week, documenting root cause and resolution for escalation

IT Intern, Charleston International Airport, Charleston, SC

May 2025 – August 2025

- Developed backend logic in C# and SQL Server to improve database access for airport systems within an Agile/Scrum team
- Automated internal forms in Adobe Acrobat Pro using JavaScript for calculations and input validation, then presented the solution in a live demo to the Head of IT
- Reimaged and deployed 100+ workstations; removed hard drives per secure IT asset disposal protocols
- QA-tested updates to *iflychs.com*, resolved real-time employee support requests, and maintained asset inventory records

Projects * Live demo at reallyrj.github.io/portfolio

Multi-Agent AI Trading System – *Python, Claude API, Alpaca API, Robinhood MCP, Telegram Bot API, Railway*

- Architected a 3-agent autonomous trading system on Anthropic's Claude API, using the Alpaca API for 24/7 trade execution and Robinhood MCP for real-time portfolio data
- Built a Researcher agent scanning 10+ news sources for BUY/SELL/HOLD signals and a Telegram Reporter agent for trade approvals
- Deployed to Railway with a GitHub CI/CD pipeline for zero-downtime auto-deploys in under 60 seconds; the system helped generate a 26.68% return on my invested portfolio in 2026

Tally: Encrypted Budgeting App* – *JavaScript, Web Crypto API*

- Built a mobile-first app that splits paychecks across bills and categories, tracks goals and net worth, and imports bank CSVs
- Implemented AES-256-GCM encryption with a PBKDF2-SHA256 key (310,000 iterations), auto-lock, and encrypted backups

Winter Block: Fitness & Nutrition Tracker* – *JavaScript, SVG, Claude AI*

- Built a training tracker with a 7-day moving-average weight trend, rule-based calorie adjustments, and PR detection
- Added AI-generated recipe suggestions, offline-first storage with account sync, and JSON backup and restore

Tax Preparation Web Platform (Capstone) – *Team Project*

Aug 2025 – May 2026

- Collaborated on a team to build a TurboTax-style web platform where users upload tax documents and communicate directly with their assigned tax expert
- Built backend file upload for tax documents and email functionality for user and tax expert communication
- Designed and developed the user interface, enforcing consistent styling standards across the codebase with Stylelint
